

EXECUTIVE PITCH PROPOSAL

Prepared for Commercial Infrastructure & Municipal Parking Authorities | September 2026

1. Executive Summary

Urban commercial hubs, municipal lots, and private infrastructure facilities face mounting operational challenges: revenue leakage from manual cash handling, long vehicle queue times at entry and exit gates, lack of live bay visibility, and cumbersome physical paper receipts.

ParkPay™ is an enterprise cloud-native parking operations and revenue optimization platform. Built on modern web architecture with real-time Google Cloud Firestore synchronization and integrated Google Workspace services, ParkPay automates vehicle check-ins, dynamically calculates multi-tier tariffs, eliminates revenue shrinkage, and delivers instant digital receipts directly through verified Gmail workflows.

2. Product Showcase & Interface Overview

Figure 1: ParkPay live operations dashboard showing real-time occupancy, revenue telemetry, interactive bay grid, and gate ledger.

Core Platform Capabilities in View:

- Instant Gate Telemetry: Live occupancy percentage, vehicle counts, active turnover metrics, and cumulative daily revenue.
- Interactive 2D Bay Grid: Real-time slot visualization with instant color-coded status tracking (available, occupied, reserved).
- Integrated Gmail Receipts: Official digital gate receipts with QR verification dispatched directly to motorist inboxes.
- Immutable Gate Audit Ledger: Complete timestamped records of entry, exit, duration, tariff rate, and payment method.

3. The Problem: The Cost of Legacy Parking Systems

LEGACY PARKING LOT OPERATIONS	PARKPAY™ SMART SOLUTION
Manual paper slips & thermal rolls get lost or torn, causing frequent customer exit disputes.	Digital receipts with instant Gmail delivery, tamper-proof verification, and permanent cloud archival.
Cash leakage & unrecorded gate exits cost facility owners an estimated 15%–25% in lost gross revenue.	System-enforced tariff calculation engine linked directly with immutable gate audit logs.
Zero real-time occupancy insights, causing unnecessary traffic congestion and vehicle queues.	Live bay capacity visualization allowing proactive gate coordination and capacity optimization.
Hardware vendor lock-in requiring expensive proprietary terminals, readers, and maintenance contracts.	Zero-footprint web application running seamlessly on standard tablets, POS devices, or desktop PCs.

4. Core Value Pillars

& i High-Speed Gate Processing (Under 5 Seconds)
Streamlined check-in with automatic IST timestamping and rapid plate lookup at exit, slashing queue times during peak traffic hours.

Ø=Ü° Dynamic Multi-Tier Tariff Engine
Configurable base rates, vehicle multipliers (Two-Wheelers, Sedans, SUVs, Commercial), and minimum charges with support for Cash, UPI/QR, and Cards.

Ø=Üç Paperless Receipts via Google Workspace (Gmail API)
Direct email dispatch of branded GST-compliant receipts to customers, eliminating thermal paper costs and printer breakdowns.

& p Enterprise Cloud Resilience & Security
Real-time persistence backed by Google Cloud Firestore with local cache support for uninterrupted operation during network drops.

5. Financial Projection & ROI (100-Bay Commercial Facility)

OPERATIONAL METRIC	BEFORE PARKPAY	WITH PARKPAY	NET IMPACT
Monthly Revenue Capture	¹4,20,000	¹4,85,000	+15.5% recovered
Thermal Paper & Consumables	¹8,500 / month	¹0 (Digital)	100% paperless
Average Gate Transaction Time	45 - 60 seconds	8 - 12 seconds	75% queue reduction
Audit & Shift Reconciliation	90 minutes daily	Real-time / Instant	Zero manual labor

6. Next Steps & Implementation Roadmap

ParkPay offers a turnkey 4-week onboarding plan covering site configuration, tariff calibration, staff training, and parallel digital cutover. We invite facility leadership to schedule a live interactive pilot demo.
